

## A NEW WORLD OF SURFACES

The cooperation with Forbo Flooring opens up a whole new world of surfaces for us and our customers. In terms of feel, indoor climate, hygiene (dust-repellent as it is antistatic) and sustainability, the option of "Furniture Linoleum" as a natural surface for our mobile partition walls is an important achievement.

---

As the world market leader in linoleum products, Forbo offers a comprehensive range of floor coverings and surface linoleum for furniture and wall coverings. The climate-positive linoleum is produced from rapidly renewable raw materials in contemporary designs. Velvety soft to the touch and silky matt in appearance: "Furniture Linoleum" has conquered the surfaces of desks, cabinets, seating furniture, cabinet fronts, doors and even light switches with its unique properties. In addition to being hard-wearing and easy to clean, the material is antistatic, lightfast, resistant to fingerprints and, above all, environmentally friendly!

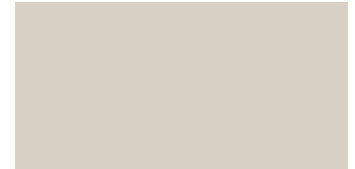

### SUSTAINABLE & DURABLE

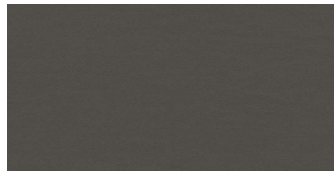

The special thing about linoleum is that it is made from natural and predominantly rapidly renewable raw materials: Flax, an annual plant, rosin, which is obtained from tree resins, wood flour as a waste product of the wood industry and limestone, which is available in abundance. These raw materials remove more CO<sub>2</sub> from the air than is required for the production of "Furniture Linoleum". The result is that Furniture binds carbon over its entire lifespan and is therefore climate-positive.
